

News from Skandiabanken Open Banking

2025-04-11 – AIS Redirect flows

Information to the users of Skandiabanken Open Banking APIs.

As the project developed new changes needed to be implemented to successfully use our new OAuth flow. For TPPs this will mean changes to the calls made to our OAuth APIs for the AIS Redirect flows.

Changes that are applied to the authorization call are as follows:

New URLs for test:

- Auth: <https://csts-test.skandia.se/ct2/oauth/v2/oauth-authorize>
- Token: <https://csts-test.skandia.se/ct2/oauth/v2/oauth-token>

New URLs for production:

- Auth: <https://csts.skandia.se/prod/oauth/v2/oauth-authorize>
- Token: <https://csts.skandia.se/prod/oauth/v2/oauth-token>

Two additional query parameters to the Auth call:

- code_challenge
- code_challenge_method

For the token call, there is one additional parameter:

- code_verifier

The refresh token has the same parameters as before but will use the new token endpoint.

More information about what code_challenge is and how to use it can be found here:

<https://www.oauth.com/oauth2-servers/pkce/authorization-request/>

Important to know: Skandia only supports S256 as the value for code_challenge_method.

For more information about the new OAuth flow, please view chapter 6 (6.2.1 to 6.2.4) in the appended documentation.

This new OAuth flow exists in both our production and test environments and is ready for you to migrate to, deadline for migration will be 30th of June.

For any questions in regard to the changes please contact us on email: openbanking@skandia.se
