

## Skandia Global Exponering

Fonden investerar i globala aktier. Investeringarna fördelas över olika länder, branscher och valutor. Förvaltningen av fonden är indexnära och strävar efter att efterbilda sammansättningen av sitt jämförelseindex. Det förväntas att uppstå mindre skillnader i avkastningen mellan fonden och sitt jämförelseindex på grund av transaktionskostnader och effekten av att fonden avstår från att investera i ett mindre antal bolag i enlighet med Skandia Fonders regler för miljö- och samhällsansvar.

Fondens mål är att följa avkastningen på sitt jämförelseindex, före avgifter.

En placering i den globala aktiemarknaden har historiskt präglats av en relativt låg risknivå för en placering i aktier tack vare god riskspridning mellan olika länder, branscher och valutor. Därför kan det förväntas att fonden även i fortsättningen kommer att uppvisa låg risk i jämförelse med andra aktiefonder med inriktning på vissa branscher, regioner eller aktier i mindre bolag. Fondens placeringar i utländska finansiella instrument valutasäkras inte, vilket får till följd att fonden exponeras mot förändringar i växelkursen för de valutor fonden är investerad i. Placeringshorisonten för fondens andelsägare bör vara minst sju år. Åtagandemetoden används för att beräkna fondens sammanlagda exponering vilket innebär att eventuella derivatinstrument tas upp till den underliggande tillgångens exponering.

Skandia Global Exponering sjönk 5,8 procent under första halvåret 2020. Under samma period sjönk jämförelseindex 6,2 procent.

Den globala aktiemarknaden inledde 2020 försiktigt med en nedgång. Makrostatistiken visade en negativ trend med bland annat det amerikanska inköpschefsindexet för tillverkning som sjönk och missade förväntningarna samt den officiella mätningen av arbetsmarknaden i USA som även den understeg förväntningarna. I februari tog marknaderna fart och steg till strax över 4,5 procent endast för att dyka och avsluta månaden ned -8,1 procent. Makrodatan översteg förväntningarna, men fokus låg på covid-19-virusets spridning och dess effekter på global ekonomisk tillväxt. Under mars tilltog volatiliteten med en kraftig nedgång på marknaderna. Reserestriktioner, förbud mot folksamlingar och i vissa fall utgångsförbud infördes världen över i spåren av virusets spridning. Vidare presenterades betydande stimulansåtgärder av världens stater och centralbanker. I april rekylade de globala börserna med 10,5 procent. Makrodatan visade en nedåtgående trend på många håll med en BNP som sjönk -4,8 och -6,8 procent i USA respektive Kina under första kvartalet. De globala börserna fortsatte upp under maj månad och makrodatan visade på blandade utfall. I juni förbättrades överlag makrostatistiken medan fokus fortsatt var på virusutvecklingen. Bland annat såg man en oroväckande ökning av nya fall i USA. Samtidigt meddelade USA att handelsavtalet med Kina fortsatt är intakt. Vidare låg fokus på protesterna mot polisvåld samt ökade spänningar mellan Nordkorea och Sydkorea. De globala börserna steg 2,4 procent i juni.

Den svenska kronan stärktes mot brittiska pund och euro, men försvagades under perioden mot amerikanska dollar och japanska yen. Nettoeffekten av förändringarna i växelkurserna bidrog marginellt till fondens absoluta avkastning. Av innehaven i jämförelseindex är det för tillfället 32 bolag som fonden inte tillåts investera i. Dessa bolag har överlag haft en svagare utveckling jämfört med index vilket därmed bidragit positivt till fondens relativavkastning med 59 baspunkter under perioden. Till de större av dessa bolag hör bl.a. Boeing, Honeywell och Philip Morris International.

Fonden får använda derivat och har under perioden placerat i aktieindexterminer i syfte att ha full exponering mot

aktiemarknaden i samband med att fonden har haft likvida medel för att hantera flöden.
